

Spotlight Presenter Webcams on the Video Bridge

Voice-activated camera switching is used by default to control which cameras appear to the audience.

The **Spotlight** feature can be used to pin a presenter to the large frame in a layout whether they are speaking or not. To do so, hover over a presenter in the Participant list and click on the settings button. In the settings menu, select the **Spotlight** option.

Note: You will need to return to this menu to remove the Spotlight when you no longer want the presenter to be pinned to the layout.

Multiple presenters can be Spotlighted if required. This can be used for layouts featuring two (or more) large frames. Spotlighted speakers will appear in the order the Spotlight was added.

To learn more, see [About Presenter Webcam Layouts](#).
